# Intel® Xeon® D

PROCESSOR-BASED RUGGED, EMBEDDED COMPUTING SOLUTIONS FROM **EXTREME ENGINEERING SOLUTIONS (X-ES)** 

## Why Choose X-ES

As a critical embedded computing hardware and software provider, X-ES has decades of experience delivering trusted solutions on-time and on-budget.

With the launch of our line of Intel<sup>®</sup> Xeon<sup>®</sup> D-1700 and D-2700 processor-based SBCs, X-ES will be continuing our tradition of engineering excellence and dedication to customer service.

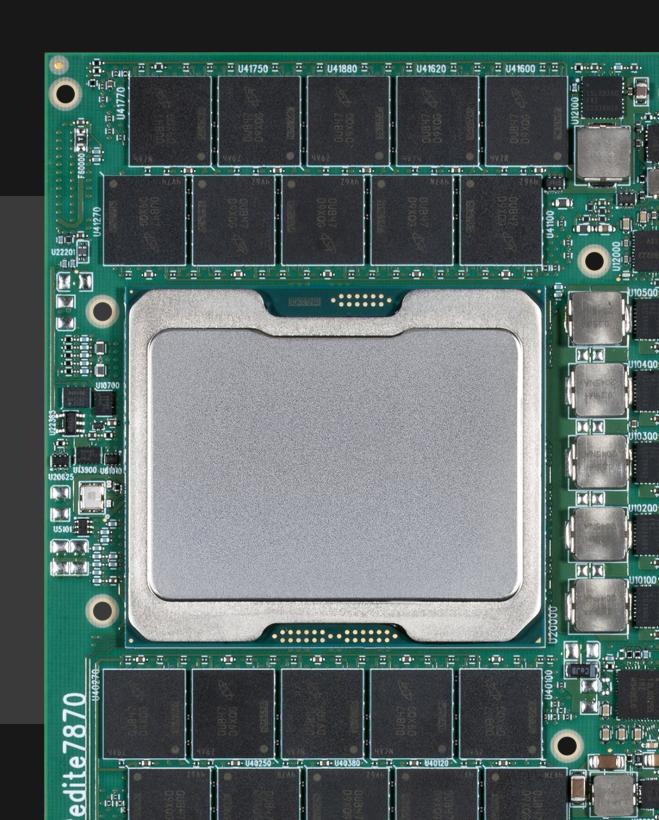

## IMMEDIATE AVAILABILITY

With boards built and ready to go, X-ES' commitment to rapidly ship product after receipt of customer PO helps programs hit the ground running without delay.

DERIVATIVE DESIGN CAPABILITY

> BUILT FOR EXTREME ENVIRONMENTS

## Why Choose X-ES

As a critical embedded computing hardware and software provider, X-ES has decades of experience delivering trusted solutions on-time and on-budget.

With the launch of our line of Intel<sup>®</sup> Xeon<sup>®</sup> D-1700 and D-2700 processor-based SBCs, X-ES will be continuing our tradition of engineering excellence and dedication to customer service.

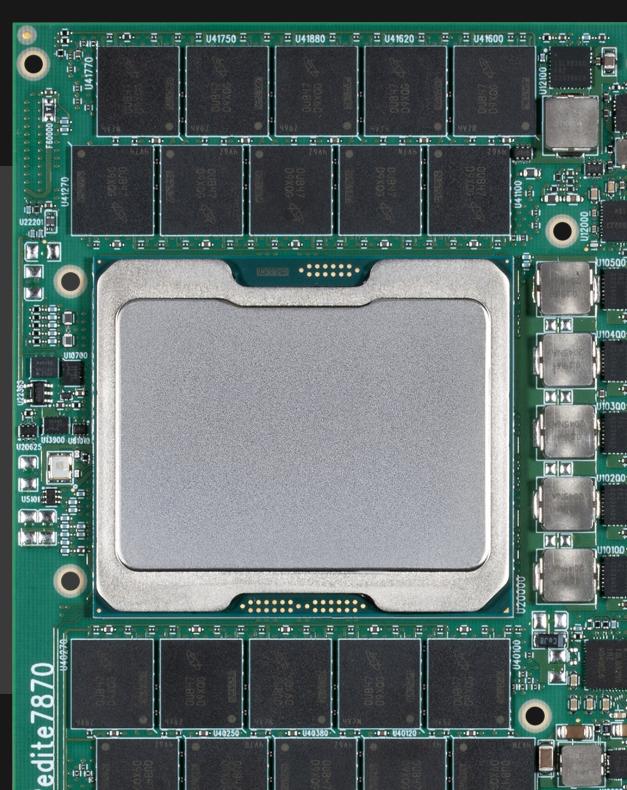

## IMMEDIATE AVAILABILITY

## DERIVATIVE DESIGN CAPABILITY

X-ES' Assembly Line Design methodology allows us to design a core board architecture that can be rapidly deployed to a variety of standard and custom form factors, expediting time-to-market for new products.

## > BUILT FOR EXTREME ENVIRONMENTS

## Why Choose X-ES

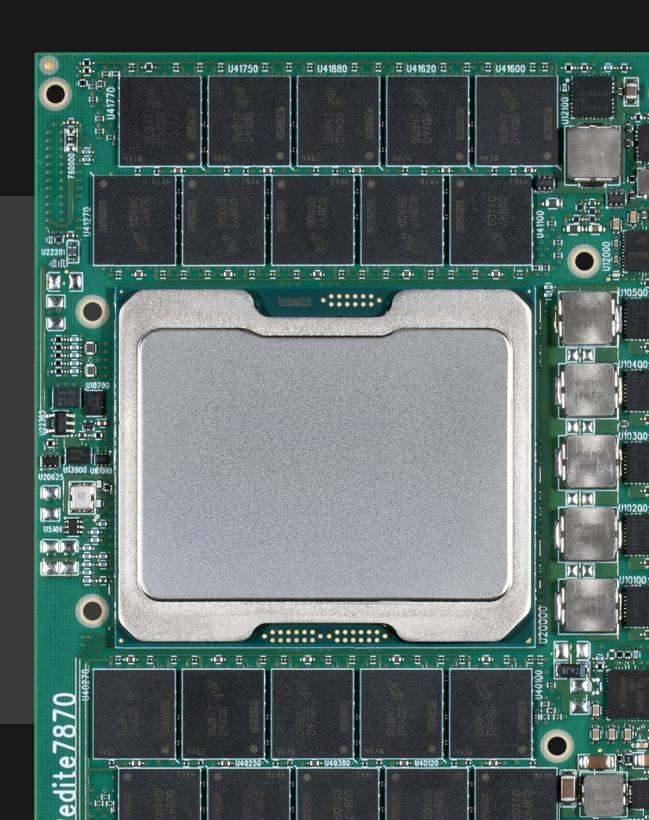

As a critical embedded computing hardware and software provider, X-ES has decades of experience delivering trusted solutions on-time and on-budget.

With the launch of our line of Intel<sup>®</sup> Xeon<sup>®</sup> D-1700 and D-2700 processor-based SBCs, X-ES will be continuing our tradition of engineering excellence and dedication to customer service.

- DERIVATIVE DESIGN CAPABILITY
- BUILT FOR EXTREME ENVIRONMENTS

Purpose-built for the demands of deployable applications in challenging conditions, X-ES' fully ruggedized hardware integrates critical features to support maximum performance in the extremes.

## Introducing: Extreme Engineering Solutions

Founded in 2002, **Extreme Engineering Solutions (X-ES)** has been a leader in the rugged embedded computing industry for two decades.

Our products are **trusted in mission-critical applications** around the world and we have earned a reputation as a preferred defense hardware supplier for our **uncompromising focus on quality and performance**.

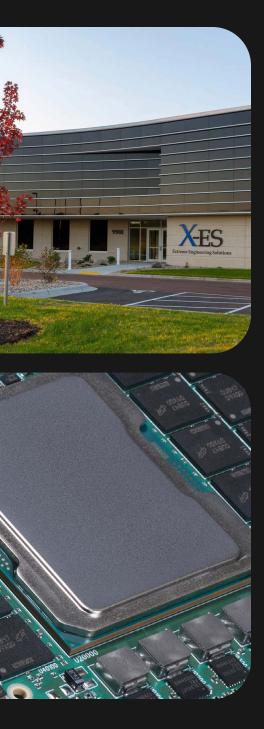

### For extreme environments

Rugged, trusted, and secure embedded solutions for deployable applications.

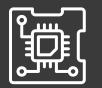

## **Core Competencies**

## 100% US-MADE

X-ES products are fully designed, configured, tested, and supported at our headquarters in Verona, WI, where we have built a dynamic team with wide-ranging expertise in embedded computing hardware and software.

## INTEL EXPERIENCE

Building on our extensive history with Intel<sup>®</sup> processor families, X-ES' Intel<sup>®</sup> Xeon<sup>®</sup> Ice Lake-D solutions provide next-generation performance paired with proven reliability and an unparalleled suite of features and capabilities.

## SUPPORT GUARANTEE

We understand how valuable time is and the harm that can come from unexpected downtime. Our four-hour support guarantee means customers receive a rapid response from one of our talented Support Engineers to get their questions answered promptly.

## CUSTOM ENGINEERING

As a result of our reliable engineering and manufacturing practices and methodologies, X-ES has a proven track record of delivering cost-effective custom or derivative product designs that meet our customers' typically aggressive schedules.

X-ES boards supporting the Intel® Xeon® D-1700 processor. Featuring up to 48 GB DDR4 ECC SDRAM,

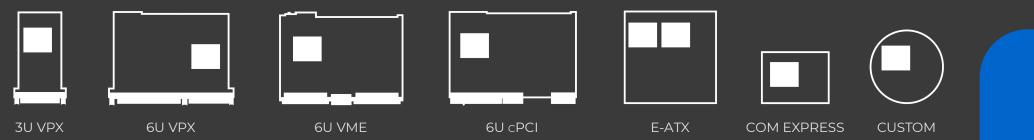

X-ES boards supporting the Intel® Xeon® D-2700 processor. Featuring up to 64 GB DDR4 ECC SDRAM, four channels of memory, and up to 20 cores.

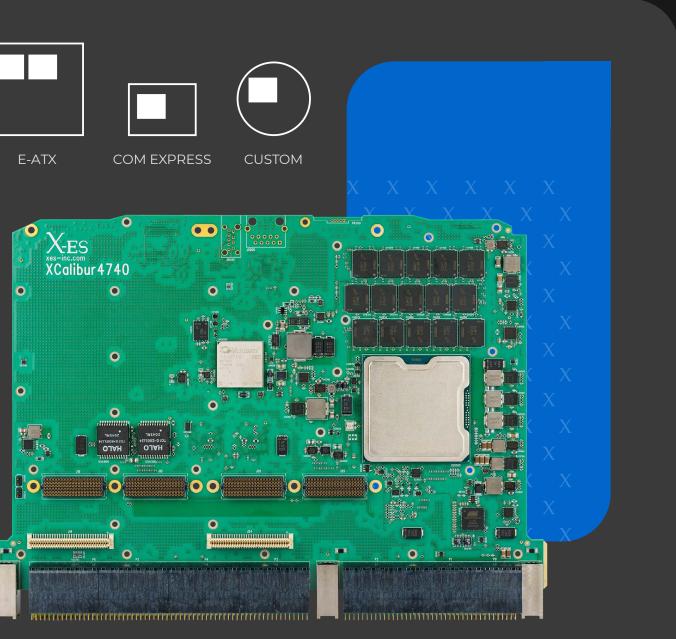

## Assembly Line Design Methodology

X-ES employs an innovative, modular engineering methodology referred to as *Assembly Line Design* that drives our entire approach to product development.

By designing and fully validating the core architecture when starting with a new processor family, we are able to re-use trusted elements across a wide variety of standard and custom form factors instead of starting anew with each board.

This saves X-ES time and customers money on development efforts, allowing us to deliver thoroughly proven new designs at unparalleled speeds.

## Assembly **Line Design**

Utilizing a modular approach to design, X-ES has created more than 35 Intel<sup>®</sup> Xeon<sup>®</sup> D-1500 (formerly Broadwell-DE) processor-based boards in industry-standard and custom form factors. >

# Key Features

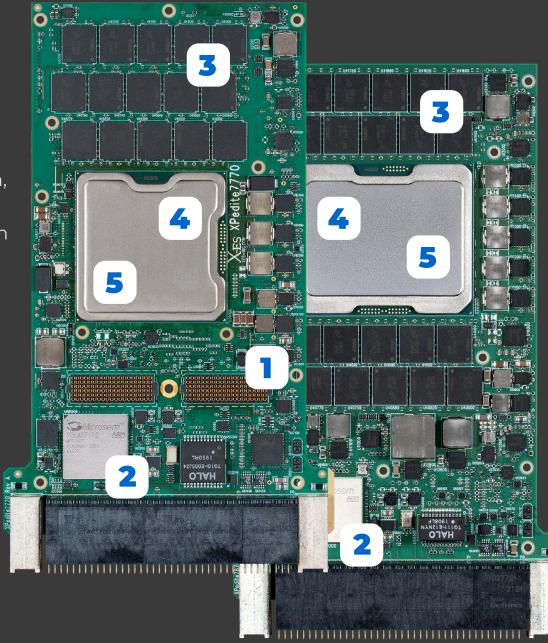

Through experienced and careful design, X-ES is able to offer Intel® Xeon® D-1700 and D-2700 processor-based boards with an unmatched suite of features.

### XMC SITE

Extend system functionality with highly configurable hosted mezzanine modules

### SECURITY FPGA 2

Integrated SecureCOTS<sup>™</sup> technology to protect sensitive data from being modified or observed

### SOLDERED MEM. 3

Integrated 40 Gigabit Ethernet connectivity for incredible networking speed and throughput

Highly optimized memory layout supports industry standard, extended temp., DRAM components with long life cycle support

## EXTENDED TEMP. 4

Native operating temperature support for -40°C to 85°C, making these processor boards ideal for extreme environments

5

### 40G ETHERNET
