The XPedite5400 is a high-performance XMC/PrPMC single board computer supporting NXP (formerly Freescale) QorIQ P3 and P4 processors. With a number of processor options to choose from, X-ES can provide a product to meet the specific power and performance requirements of today's embedded computing applications.

The P4080 processor brings the raw power of eight e500mc cores running at up to 1.5 GHz and dual-channel DDR3 memory, delivering unparalleled multi-core performance. For applications that are more power-conscious, the P3041 processor offers four e500mc cores running at up to 1.5 GHz with a single channel of DDR3 memory, all within a significantly reduced power envelope. Additional reduced-function processors are available to meet any power and performance budget.

The XPedite5400 provides a high-performance, feature-rich solution for current and future generations of embedded applications. Wind River VxWorks, Linux and Green Hills INTEGRITY-178 tuMP Board Support Packages (BSPs) are available.
